

# The London Sash Window Company

## Putney SW15

This 1950's modernised apartment block in London was situated on a busy main road and we were asked to provide a noise reduction solution.

### Procedure: secondary glazing

We were able to fit secondary glazing that was fitted flush to the inside wall of the window which allowed for a good size gap between the existing sash windows. This allowed for optimum sound insulation. The units are a combination of casement style windows and horizontal sliding glass panels to allow for easy cleaning and opening of the original windows.
